BUILT AROUND USEFUL WORK

A clearer place to move work forward.

Start with one useful workflow. Give it an owner, a next action and a visible outcome.

01 / CUSTOMERS**Turn a bottleneck into a brief**

Describe the repetitive task, who does it, how often it happens and what a good result looks like.

02 / DEVELOPERS**Build something people use**

Bring a working demo, explain its limits and propose a small pilot with measurable acceptance criteria.

03 / STUDENTS**Create practical proof**

Use structured project briefs to practise clear requirements, documentation and responsible delivery.

04 / PARTNERS**Evaluate the actual product**

Review the live office, delivery approach and a scoped opportunity. Request evidence for any business claim.

THE INVITATION

Bring one real problem. Explore a small, clearly scoped first build.

TWO CLEAR ENTRANCES

Explore publicly. Operate privately.

EARLIER OWNER-RELEASE VIEW / CURRENT CONTROLS MAY DIFFER

PUBLIC

ESN overview

Customer, developer, student and partner paths. A place to discover the offer and start a conversation.

PRIVATE

Office workspace

Sign in to approved access. Use planning tools, your workspace and assigned responsibilities.

Public overview

Owner / team sign-in

The public overview does not expose private notes, cashflow or a staff directory.

OWNER WORKFLOW

Build your team with clear responsibility.

Owner creation + task save verified live

01

Create the member

Open the Team tab. Add the person's email, display name, job title and responsibilities, then select Create member.

02

Share the private setup link

Use Copy setup link and share it privately with the intended person. It is not emailed and disappears when the panel closes.

03

Assign a concrete task

Open Tasks. Add a title, active assignee, due date, priority and acceptance criteria, then select Create task.

04

Review and manage access

Review All team tasks and completion notes. Use Edit profile to change responsibilities or disable Office access enabled.

The owner cannot deactivate their own account. Setup links can be renewed only before a member first activates. No artificial seat cap is set; hosting limits still apply.

MEMBER WORKFLOW

Know your role. Own the next action.

A practical routine for working from a browser.

01 Set up your account

Open the private link from your administrator. Accept the invitation, choose your own password and sign in.

02 Review your profile

Check your job title and responsibility. Ask the owner to correct inaccurate access or role information.

03 Work from assigned tasks

Open Tasks. Choose To do, In progress, Blocked or Done. Add a progress note and select Save task update.

04 Close with evidence

Put a delivery summary or evidence link in the completion note. Use Refresh to check current records; dashboard counts cover the loaded page.

YOUR ROLE GUIDE

Open My manual, then Copy manual or Download text. It is assembled locally from your profile and loaded tasks; no AI call runs.

CRM, SALES & CASHFLOW

From a lead to a clear next step.

Keep optional contact email and phone details beside the deal. Record follow-ups and amounts manually.

**START OF DAY****Choose one money action**

Review overdue payments, due follow-ups and proposals that need a decision. Choose the next useful action.

END OF DAY**Record what changed**

Update received money, deal stage and next action. Keep the customer or deal reference clear.

READ THE NUMBERS CORRECTLY

Pipeline: potential work, not guaranteed income.

Due: a payment expectation recorded against a deal.

Received: manually recorded money, not a verified bank balance.

Currencies stay separate. Receivables are manual; no bank sync, tax calculation or income guarantee.

WORK ACROSS DEVICES

One web address. Your usual tools.

Use a current browser on Windows, macOS, iOS or Android. The lighter mobile view is the practical default.

GOOGLE

Gmail / Calendar / Meet

GITHUB

Code and collaboration

DISCORD

Team conversation

SHORTCUTS OPEN THE OFFICIAL SERVICE

Sign in separately to each service. Opening a shortcut does not grant ESN access to your inbox, repositories, contacts or messages. API data sync is a separate integration project.

LIVE TALK**Use your meeting service**

Open Google Meet or Discord for voice or video. Start screen sharing there and select the intended window or tab.

DEVICE TIPS**Choose a comfortable view**

Use the simple view on phones or slower devices. Keep your browser current and pause 3D motion if needed.

Camera, microphone and screen sharing depend on the external service, browser permissions and device support. This release is a web app; no native app or physical-device certification is claimed.

SOFTWARE / APPLIED AI / AUTOMATION

A small start. A clear upgrade path.

Services are scoped for your business. Prices in USD; confirm feasibility, availability, final amount and delivery before payment.

Mini service**US\$9 one-time**

One prompt tune-up, public-page review or workflow mini plan.

Workflow Blueprint**US\$79 one-time**

One process map, priorities and a build scope. One clarification.

Automation Starter**from US\$349**

One workflow; one trigger; five actions; two standard apps.

AI Workflow Pilot**from US\$999**

One AI task and provider; human review; 20 evaluation examples.

Software Launch Sprint**from US\$2,499**

Three screens, one record type, one user flow, up to two roles.

Care Plan**from US\$149/month**

One accepted system, one monthly check, up to two hours of work.

Blueprint fee credited once toward an accepted US\$349+ build for the same client and project within 30 days; no stacking or cash alternative. Build packages include one in-scope revision and 14 days of fixes for reproducible defects against the accepted scope.

Hosting, licences and API usage are separate. Care is optional by agreement; unused hours expire monthly. No 24/7 or outcome guarantee. Full scope and current terms: esnaistudio.com/#packages. Checkout is not connected.

INVITE THE RIGHT CONVERSATION

Clear promises. Credible first steps.

CLIENTS

Bring one workflow you repeat every week.

Ask for a scoped discovery conversation. Agree the problem and success measure before discussing automation.

AI ENGINEERS

Show a small build that solves a real problem.

Share a demo, its limitations and your role. Collaborations and roles are subject to a separate agreement.

STUDENTS

Turn an idea into a documented project.

Practise a brief, delivery checklist and honest demonstration. No accredited course, qualification or job guarantee is offered.

INVESTORS / PARTNERS

Evaluate the workflow, product and execution.

Request a product walkthrough and relevant evidence. This catalogue is not an investment offer or a financial forecast.

OWNER / WORKFLOWS TAB

One start. Three assigned tasks.

A simple way to repeat a useful process while keeping people responsible for the work.

01

Team onboarding

Start a structured introduction for a new colleague.

02

Sales follow-up

Turn a sales follow-up routine into assigned work.

03

Accounts collection

Organise payment follow-up around recorded receivables.

04

VISA AI case review

Structure case review work with human decisions and checks.

HOW TO START

Open **Workflows**, choose a workflow and an active member, then select **Start workflow**. The office creates three tasks for that same person. Open **Tasks** to review and update them.

Steps are instructions, not enforced dependencies. No deadline is added automatically. Starting a workflow sends no external messages and makes no filing, payment or visa decision.

OPTIONAL FOCUS TOOLS

Set the atmosphere. Keep control of your device.

FOCUS PANEL

Try locally generated ambient tones and short motivational lines when they help you concentrate. These controls are optional; stop the sound whenever you prefer quiet.

CAMERA

Preview locally

Start the camera preview yourself and grant permission if you want to use it. The preview stays local; it is not recorded or uploaded.

MICROPHONE

Check your input level

Start the microphone level check yourself. It shows input activity locally; it does not create a recording or upload audio.

USE THE RIGHT TOOL FOR A CALL

These are local checks, not a live meeting or screen-sharing connection. Use the external meeting service for a call. Actual camera and microphone hardware were not tested for this release; browser and device support can vary.

LAUNCH EDITION / 14 SEPTEMBER 2026

A useful foundation. An honest next step.

THIS RELEASE

Public overview; private office; planning and notes; CRM, Sales & Cashflow; supervised AI COO briefs; lighter mobile view; optional local focus and device-check tools.

TEAM RELEASE

Owner creation and task completion saves verified live. Member access isolation and repeatable three-task workflows passed database checks. Personal password setup is built; a full member password-entry test is still unverified.

NEXT STAGE / NOT INCLUDED YET

Automatic Gmail or GitHub data sync, embedded calls, paid subscription checkout and autonomous business agents. Those need their own configuration, permissions and end-to-end verification.
